

Documentation for CodeReview06

Goals

- Create a Homepage using Typescript and style it with bootstrap.
 - Make a Parent class which holds the general information (properties).
 - Extend the Parent class and create three child classes with specific information.
 - Group the child classes into separate rows.
 - Add date/time to the separate locations and display them sorted in an array of locations (places,events,restaurants) ascending based on the created date/time property.
 - Make the homepage responsive to different screen sizes for example: (small screen, medium screen, large screen)

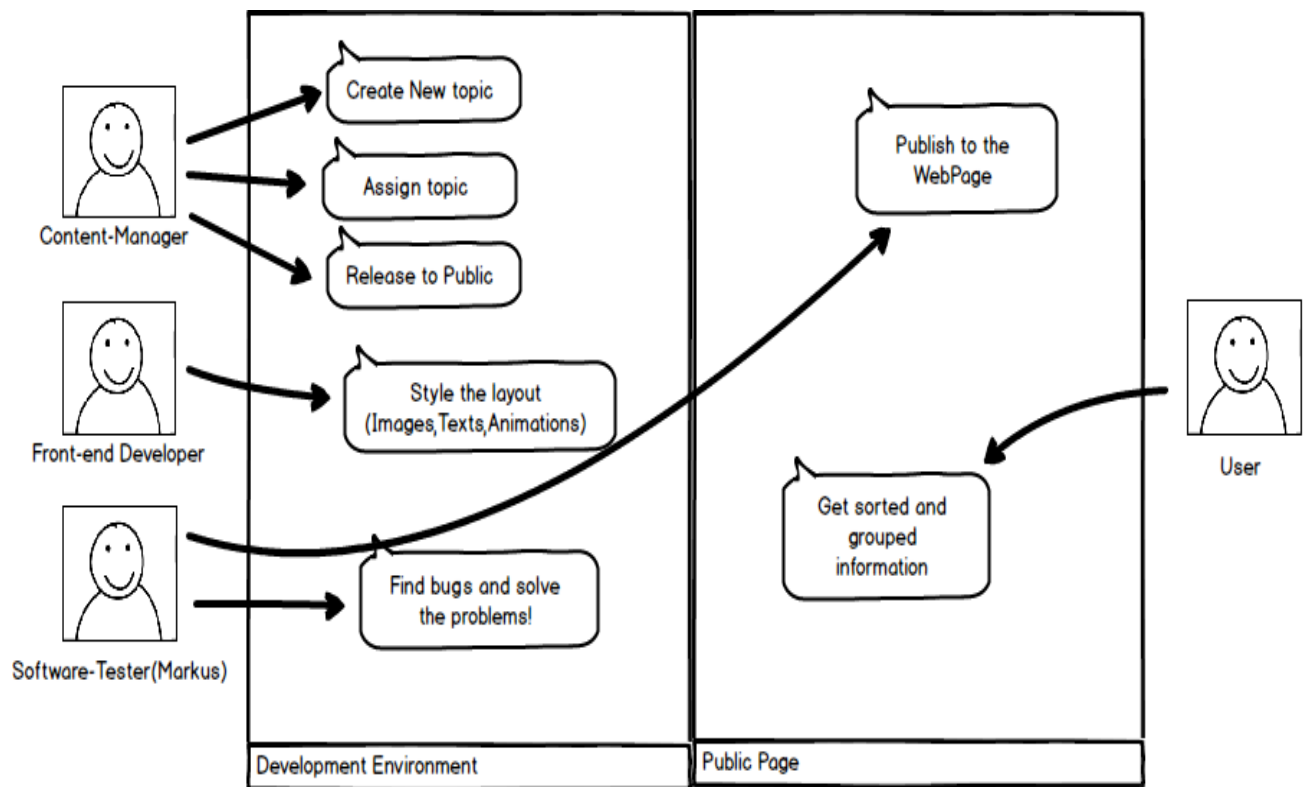

Non-Goals

- In this project we don't expect:
 - to rate the locations.
 - to have a user interface.
 - to store the data of the users.

Anti-Goals

- Not allowed to leave comments for users.
- Allowing unauthorized access to sensitive data.
